

Carton Flow Rack

Carton flow rack is a first-in, first-out order picking solution that is powered by gravity. A carton flow system is designed for loose cartons or split cases. When compared to static pick systems this solution can save up to 75% in labor costs.

Because the stocking and picking aisles are separate, carton flow adds efficiency by eliminating conflict between stockers and pickers. The high visibility of the pick faces prevents out-of-stock situations and the first-in, first-out rotation assures food distributors of product freshness. We can show you how to use a carton flow system with your industrial storage racks.

Carton Flow Rack

Carton Flow Rack may solve your warehouse problem if you:

- Need to quickly pick up and ship individual cartons
- Have high SKU traffic
- Want rapid order picking
- Need to reduce labor costs
- Excellent solution for higher-volume broken case picking

Almost always part of a pick module system, carton flow can add value, save time, and reduce costs even when implemented in a single bay. This storage system is ideal for a wide range of sectors from warehouses storing mass consumer goods to pharmaceuticals, cosmetics, computer components, and more.
