

Industrial Steel Shelving

In many cases, a pallet rack system is a too much solution for the storage problem at hand. In those situations, industrial steel shelving provides the answer.

Engineered to provide safe, economical storage space for virtually any type of hand-loaded material, basic steel shelving units are configured from posts, shelves, and compression clips. These basic shelving systems can be enhanced with bins, boxes, dividers, and drawers to maximize available space and create efficient storage solutions. Steel shelving provides storage solutions for everything from general office storage to integrated multi-tier warehouse applications.

Industrial Steel Shelving

Industrial Steel Shelving may be the solution to your warehouse problem if you:

- Have hand-loaded equipment or records
- Need an economical solution
- Want a choice of colors and styles
- Need a solution that's easily expanded
- Want a flexible system for future changes
- Capacities are 300-1200# per shelf level

This isn't your home-improvement superstore shelving. From light-duty small parts storage to shelving-supported mezzanines, and multi-level systems, industrial steel shelving can be designed around your small item storage needs.

Talk to RMH systems today to find out the best solution for your system.
