

Selective Pallet Rack

The building block of material handling - selective pallet rack provides efficient use of space and immediate access to every load or pallet stored. Because it provides the best ratio of storage capacity to product selectivity, selective pallet racking is an effective solution for almost every storage need, from basic pallet storage to the most complex order-picking operations.

By adding decking and other accessories, pallet racking systems become even more versatile, allowing the storage of everything from the smallest carton to drums and wire reels.

Selective Pallet Rack

Selective Rack may solve your warehouse problem if you:

- Need easy access to all products at all times
- Have a wide variety of products (SKUs)
- Want flexibility in expanding or reconfiguring your storage
- Require an economical solution

Available in a variety of heights, depths, bay lengths, and capacities, a selective pallet rack is the definition of flexibility in warehouse and distribution center storage.

All RMH Systems selective rack solutions exceed the Rack Manufacturers Institute and ANSI standards. This includes automatic engagement devices that automatically seat and lock beams into place. This reduces installation time and guards against accidental beam displacement.

Talk to RMH to find out the best application for your system.
